

Vanguard Instruments Company, Inc.

Herculito

The Herculito is a lightweight and compact 100-Amperes DC micro-ohmmeter. The meter is designed to test EHV circuit-breaker contact resistance, bushing contact joints or for performing any low-resistance measurement. Using the latest switching power supply technology, the Herculito merely weighs 18 lbs (8 kg) and is housed in a 17"W x 7"H x 13"D (43 cm x 18 cm x 33 cm) watertight, high impact, plastic case. The Herculito's power supply is thermally protected.

The microprocessor-based Herculito can accurately measure resistances ranging from 1 micro-ohm to 20 milliohms. The resistance reading is displayed directly in micro-ohms or milliohms. No calculations are required to compensate for the test lead resistances when using the Herculito.

The Herculito has been in production since 2003.
